DO HUU HAU

Backend Developer | https://github.com/dohuuhau2005
0356100675 | huuhau712@gmail.com

Highly motivated and fast-learning IT student with a solid foundation in software development. Experienced in coordinating personal projects, demonstrating problem-solving and communication skills. Extremely adaptable and eager to secure a Software Engineer to apply technical knowledge, absorb practical experience, and contribute to the team's success.

EXPERIENCES

TEACHING ASSISTANT

Ho Chi Minh University of Foreign Languages and Information Technology (HUFLIT)

SEP 2026 – PRESENT

Course Assisted: Database Management System
Description :

- Mentored students during weekly lab sessions, providing hands-on support in writing SQL queries, designing database schemas, and debugging.
- Recommend solutions to handle tough projects.
- Created step-by-step video tutorials for lab solutions to reinforce students' understanding of practical applications and best practices.

DATA COLLECTOR

Công Ty Cổ Phần Dịch Vụ Công Nghệ Tin Học LT

OCTOBER 2026 – PRESENT

Project : Street View Metadata
Description :

- Harvested street-level imagery and text (house numbers, storefront signs) using a dedicated software.
- Converted raw visual data from street signs into structured metadata to feed web-based mapping software (similar to Google Street View).

PROJECTS

BACKEND DEVELOPER

Power Corporation System

APR 2026 – PRESENT

Technologies : NodeJs, ReactJs, AES, RSA, Oracle, RabbitMQ, Redis, MongoDB, Nginx
Description :

- **System Architecture & Messaging:** Implemented an event-driven architecture using RabbitMQ to asynchronously route operational commands between 2 core servers, ensuring reliable communication and zero data loss.
- **Distributed Database:** Deployed and managed a distributed database system across 4 distinct server nodes, maintaining strict data integrity and high availability for large-scale electricity records.
- **Performance Optimization:** Integrated Redis to cache low-volatility, frequently accessed data, significantly reducing the primary database load and improving overall system response times.

FULLSTACK DEVELOPER

Souvenir E-commerce Platform

AUG 2025 – PRESENT

Technologies : ASP Web API, ReactJs, SQL Server, Redis
Description :

- **System Architecture:** Implemented a microservices architecture and deployed an automated, standalone service specifically for voucher distribution.
- **Performance Optimization:** Integrated Redis to cache popular souvenir data, significantly reducing database load during high-traffic periods.

FULLSTACK DEVELOPER

Medical System Segmentation And Classification Brain Tumor | Graduation Thesis

DEC 2025 – AUG 2026

Technologies : NodeJs, ReactJs, MongoDB, FlaskAPI, RabbitMQ, Keras, AES, RSA
Description :

- **System Architecture:** Engineered a distributed, asynchronous processing pipeline for MRI brain tumor analysis, decoupling monolithic workflows into 5 independent microservices (NodeJS, Preprocessing, Segmentation, Classification, and File Server)
- **Performance Optimization:** Handled process crashing and timeout problems during deep learning model inferences by separate and handle simultaneously tasks into asynchronous Python workers.

EDUCATION

SOFTWARE ENGINEERING

HUFLIT University

EXPECTED GRADUATION : FEB 2027

- **Technical Focus:** Distributed Systems, System Architecture, Database Optimization & Scalability, Algorithms
- **GPA** : 3.57 / 4.0

SKILLS

- **Programming Languages** : C#, Java, Python, JavaScript
- **Database** : SQL Server, Oracle, PostgreSQL, MongoDB, Firebase
- **Technologies** : Docker, ReactJs, NodeJs, RabbitMQ, Redis, ASP Web API, Flask API

ACTIVITIES & HONORS

Google Developer Groups (GDG) - Ho Chi Minh City

- Regularly attended major tech conferences (e.g., DevFest, Google I/O Extended) to stay ahead of industry trends in **Cloud Computing, Backend Architecture, and AI**.
